

FLINT RESTORATION GROUP, Inc.

DATE: 29 March 2016

TO: JOINT FLINT COMMITTEE ON PUBLIC HEALTH AND EMERGENCY

FROM: Flint Restoration Group, Inc. *Harrell D. Milhouse, President*

RE: Next step alternative to bottled water and sink filters

Leaders. As you go about the business of discovering what went wrong. Please also consider the solutions needed now. I am mindful that Senate Minority Leader Jim Ananich, Senator Cowell, State Representative Neely and many of you have looked into the viability of whole house water purification units being used as a next step option.

We at the Flint Restoration Group have developed a socio-economic model that will allow crack units of Flint residents using existing faith/community infrastructure to sign up and install whole house units on a massive level. There are about 28,000 residents paying water bills and about 31,000 residential units in Flint (according to 2010 Census and other data). Roughly 17,000 homes have been tested by DEQ as of March of 2016. We have seen reports from Wayne County School of engineering to Virginia Tech. We have screened over 14 companies and have purchased and installed units in several flint homes with Artesian Water Technologies. They have 8 months data on a whole house system that will work five years maintenance free and produce non-detect for lead and copper (actually rated for 7 to 10 years). We would like to come before your committee and display how and why you should support funding installation of a whole house systems in every house in Flint. As pipes are fixed and coated more impurities will enter into people's homes. A vanguard unit that can stop heavy metals, turbidity, colour, sediments, organics, chloramines and suspended solids down to 3 microns should be available NOW as a vanguard. Our socio-economic model have identified local contractors with the bond insurance, experience and wherewithal to install. They have agreed to use city of Flint people in the process and we secured a Flint company to secure the deployment process every step of the way. We have secured the Community of Family and Youth Center connected to New Jerusalem Full Gospel Church as our fiscal/physical sponsor. We have almost a 100 trained volunteers ready to sign up residents to obtain voluntary participation to receive such units. We have the facilities at C.O.F.Y. to meet, train and deploy. We believe when non-profit meet with for profit solutions can be achieved. We look forward to gaining your support for this worthwhile viable next step.

NEXT STEP

CITY OF FLINT

WHOLE HOUSE WATER PURIFICATION

FILTER PROJECT

"Organization is a great power in directing the affairs of a people toward a given goal. To properly develop the desires that are uppermost we must first concentrate through some system or method and there is none better than organization."

The Flint Restoration Group ("FRG") has developed a socio-economic model to redress the problem of unsafe drinking water in the City of Flint. We are focused on and immediate next step solution.

We believe a whole house water purification five year maintenance free filter is the next step beyond bottled water and sink filters. The whole house unit is installed at the point where water enters the home. This is the most realistic immediate solution for the majority of residents in Flint. We have teamed up with Artesian Water Technologies as the company that has tailored a system to specifically redress the toxins found in Flint water. We are currently testing the system in a few City of Flint homes.

INSTALLATION

We have secured a commitment from the Sampson Group, H.E. Powell Builders L.L.C., Rock Enterprises, Inc. and Michigan Security (see attached letters). These contractors have the licensing, plumbers, equipment, electricians, vehicles, bonding, insurance and wherewithal to install the whole house water purification units. These contractors have agreed to hire City of

Flint residents, to participate in installation from an On the Job Training perspective. The contractors along with "FRG" agree that citizens of the City of Flint must participate on a grass roots level in resolving the problem of clean drinking water.

Michigan Security will provide safety while the contractors install the whole house water purification units. This process is very similar to the State Police or National Guard going around with residents door to door to pass out water.

COMMUNITY PARTICIPATION

We believe the north wards are the hardest hit or most difficult to install whole house water purification units in. We want to start there. We will use the Community of Family and Youth Center (C.O.F.Y.) on Saginaw and Carpenter to meet and train residents for O.J.T. and residential sign up training. The C.O.F.Y. Center will serve as our physical/fiscal sponsor. This will help private or corporate groups receive a tax deduction for their sponsorship of any units.

PROFESSIONAL SUPPORT, ACCOUNTABILITY AND VIABILITY

Harrell D. Milhouse our President is also an attorney. He has crafted the service agreements and reviewed the legalities associated with this next step model. We have consultants, accounts, faith leaders and para-professionals on our board of directors. We know that out of the 40,000 plus residential units over 31,000 are occupied (according to 2010 Census). We know according to information posted on the DEQ website as of March 4, 2016 over 5000 units need whole house systems now. All Flint water is bad. The fact is we don't know what we don't know. Citizens of Flint are all being asked NOT to drink the water but instead to use Whole House Filters. Therefore, we advocate every home receive a FREE ARTESIAN FILTER KING 03 SERIES WHOLE HOUSE SYSTEM.

Your review and consideration are appreciated in advance.

Sincerely,

Olivia Mitchell
Vice President

Best Regards,

Reggie Davidson
Executive Director

RE: Anti-Blight Demolition – Whole House Water Purification Solutions

Dear President and Board:

H.E. Powell Builders, LLC is happy to announce our acceptance as an exclusive contractor in your anti-blight, water purification, and vocational training solutions. We have conducted demolitions for the City of Flint, MI, and throughout the county for well over ten to fifteen years, we firmly believe that the socio-economic problems should be solved by local organizations and residents.

Likewise, we are committed to hiring and sub-contracting City of Flint, MI, residents for any and all demolition or whole house water purification projects Flint Restoration is able to obtain. We will work directly with your group, any fiscal sponsor, and local churches to screen potential workers and administer training. We are prepared to provide our licenses, credentials, and expertise toward your anti-blight, water purification, and vocational training efforts.

Please let this letter serve notice to any local government officials, fiscal sponsors, community groups, or any local faith based groups. H.E. Powell Builders will serve with Flint Restoration Group to redress anti-blight demolition, water purification solutions and vocational training specifically for the City of Flint.

Sincerely,

Harry E. Powell

RE: Anti-Blight Demolition – Whole House Water Purification Solutions

Dear President and Board:

We at Michigan Security are excited about the opportunity to partner with this non-profit organization. As you know, over the years our business has provided security in Evergreen Regency, Amy Jo Manor and some of the most challenging housing projects in the City of Flint. Also, we have provided security for construction and demolition projects such as the recent demolition of Meijer on Pierson Rd. in Flint, Michigan.

We are committed to hiring and sub-contracting City of Flint, MI residents for any and all demolition or whole house water purification projects the Flint Restoration Group can obtain. We will work directly with your group and any of its physical/fiscal sponsors to offer vocational training in safety and roadside safety along with our sister company "Michigan Towering".

We are committed to being an exclusive contractor of Flint Restoration Group in its anti-blight demolition, water purification solutions, and vocational training efforts.

Sincerely,

Bruce Brock
CEO
